ABSTRACT

The Smart Service Finder with Trust Building and AI Recommendation System is a smart platform designed to help users find trusted local service providers easily and safely. The system connects customers with verified workers such as plumbers, electricians, carpenters, and home service professionals.

The platform uses AI-based recommendations to suggest the best workers based on location, ratings, trust score, availability, and reviews. Features like transparent pricing, worker verification, booking management, secure payments, and user feedback help improve trust and service quality.

The project aims to provide a secure, reliable, and user-friendly service marketplace for customers and workers.

PROBLEM STATEMENT

- Difficulty in finding trusted workers.
 - Lack of worker verification.
 - No transparent pricing system.
 - Poor service quality and fake reviews.
 - Time-consuming worker search process.
 - Lack of trust between customers and workers.
-

PROJECT OBJECTIVES

- To build a smart service marketplace platform.
 - To provide AI-based worker recommendations.
 - To ensure worker verification and trust building.
 - To provide transparent pricing and reviews.
 - To enable secure booking and payment system.
 - To improve customer satisfaction and service quality.
-

PROPOSED SOLUTION

The proposed system is a web and mobile-based platform that connects users with nearby verified service providers.

The platform includes:

- AI-powered worker recommendation system.
 - Nearby worker discovery using location services.
 - Worker verification and trust score.
 - Secure booking and payment system.
 - Ratings, reviews, and work proof uploads.
 - Admin panel for monitoring workers and users.
-

TECHNOLOGY STACK

Category	Technologies
Frontend	React.js, React Native
Backend	Node.js, Express.js
Database	MongoDB Atlas
Styling	Tailwind CSS
Authentication	JWT, Google OAuth
AI	Claude AI
Maps	OpenStreetMap, Leaflet
Version Control	GitHub
Deployment	Vercel / Render

CORE FEATURES

Authentication

- User and Worker Login/Signup
- Google OAuth Login
- JWT Authentication

Worker Discovery

- Nearby Worker Search
- Top Rated Professionals
- Budget Friendly Workers
- Filter by Rating, Distance, and Price

AI Recommendation

- AI Chatbot Assistance
- Problem-to-Worker Mapping
- Smart Worker Suggestions

Booking Management

- Slot Booking System
- Booking Confirmation
- Booking History

Trust Building

- Worker Verification
- Ratings and Reviews
- Work Proof Uploads
- Complaint Handling

Payments

- Secure Online Payments
- Transaction History
- Multiple Payment Options

Admin Panel

- Manage Users and Workers
- Remove Fake Profiles
- Monitor Platform Activity

TEAM MEMBER ROLES & RESPONSIBILITIES

1. KARRI MOHAN VAMSI REDDY

Role: Team Leader & Frontend Developer

Responsibilities:

- Managing project workflow
- Developing frontend UI
- API integration
- Documentation management

2. YARRAMSETTY PAVAN PUTRA

Role: Backend Developer

Responsibilities:

- Developing APIs
- Authentication system
- Database connectivity
- Payment integration

3. ADDAGARLA LEHITHA

Role: Database & Testing Manager

Responsibilities:

- Managing MongoDB database
- Testing modules
- Bug fixing
- Data handling

4. KONAGALLA SRAVANI

Role: UI/UX Designer

Responsibilities:

- Designing user interface
- Improving user experience
- Mobile responsive design

- Tailwind CSS styling

5. PENUGONDA NAGA SUPRAJA

Role: AI Developer

Responsibilities:

- AI chatbot integration
- Recommendation logic
- Trust score system
- AI response testing

6. KRISHNAM HARSHA VARDHAN

Role: Integration & Deployment Engineer

Responsibilities:

- Frontend-backend integration
 - GitHub management
 - Deployment handling
 - Performance monitoring
-

7-DAY PROJECT DEVELOPMENT PLAN

DAY 1 – Requirement Analysis & Setup

- Finalize project idea
- Create GitHub repository
- Setup frontend and backend
- Assign team roles

DAY 2 – Authentication Module

- Develop login/signup system
- Add Google OAuth
- Setup JWT authentication
- Create database schemas

DAY 3 – Worker Discovery Module

- Integrate maps and location services
- Create worker profiles

- Implement nearby worker search
- Add filtering options

DAY 4 – AI Recommendation System

- Integrate Claude AI
- Develop chatbot system
- Implement worker recommendation logic
- Test AI responses

DAY 5 – Booking & Payment System

- Create booking module
- Add slot selection
- Integrate payment gateway
- Create booking history

DAY 6 – Admin Panel & Testing

- Develop admin dashboard
- Add complaint handling
- Perform testing and bug fixing
- Improve responsiveness

DAY 7 – Deployment & Presentation

- Deploy application
- Final testing
- Prepare PPT and documentation
- Demonstrate project workflow

EXPECTED FINAL OUTPUT

- Smart AI-powered service marketplace.
 - Trusted nearby worker recommendations.
 - Secure booking and payment system.
 - Transparent pricing and reviews.
 - User-friendly and responsive platform.
 - Improved trust and customer satisfaction.
-

CONCLUSION

The Smart Service Finder with Trust Building and AI Recommendation System is an innovative solution that helps users easily find trusted local service providers.

By combining AI recommendations, secure booking systems, worker verification, and transparent pricing, the platform provides a reliable and user-friendly service experience.

This project demonstrates modern full-stack development, AI integration, and smart service management technologies.

THANK YOU

SMART SERVICE FINDER WITH TRUST BUILDING AND AI RECOMMENDATION SYSTEM
